ASSIGNMENT: 4B

React code:

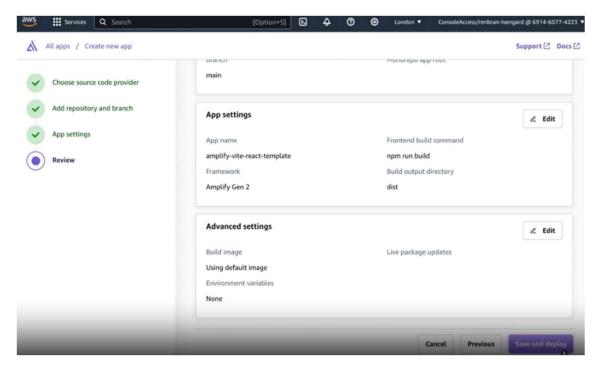

```
<!DOCTYPE html>
<html lang="en">
  <head>
    <meta charset="utf-8" />
    <link rel="icon" href="%PUBLIC URL%/favicon.ico" />
    <meta name="viewport" content="width=device-width, initial-scale=1" />
    <meta name="theme-color" content="#000000" />
    <meta
     name="description"
     content="Web site created using create-react-app"
    />
    <link rel="apple-touch-icon" href="%PUBLIC URL%/logo192.png" />
    <!--
     manifest. json provides metadata used when your web app is installed
on a
      user's mobile device or desktop. See
https://developers.google.com/web/fundamentals/web-app-manifest/
    -->
    <link rel="manifest" href="%PUBLIC URL%/manifest.json" />
    <!--
      Notice the use of %PUBLIC URL% in the tags above.
      It will be replaced with the URL of the `public` folder during the
build.
      Only files inside the `public` folder can be referenced from the
HTML.
      Unlike "/favicon.ico" or "favicon.ico", "%PUBLIC URL%/favicon.ico"
will
      work correctly both with client-side routing and a non-root public
URL.
      Learn how to configure a non-root public URL by running `npm run
build`.
    <title>React App</title>
  </head>
```

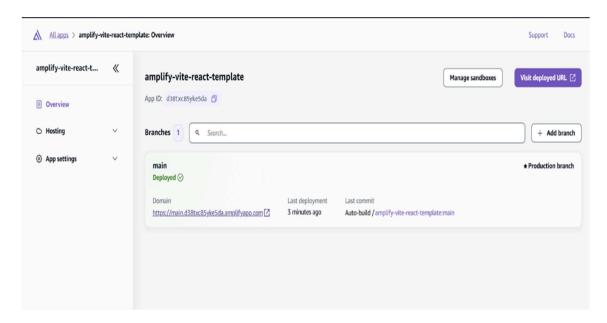

STEPS ON AWS LAB:

Quickstart

- Welcome to AWS Amplify! In this quickstart guide, you will:
 - 1. Deploy a React and Vite app
 - 2. Build and connect to a database with real-time data updates
 - 3. Configure authentication and authorization rules

SETTING UP:

DEPLOYED APP TESTING :
